June 27, 2006

Dear Medchart Users:

As you probably know MSP has changed the data requirements for Teleplan submissions with the addition of new location codes for services. This will affect all previous versions of Medchart (and other billing software). After October 1, 2006 you will need to use billing software that supports the new codes.

I have finished the latest update to Medchart (version 12) that uses the new codes (and automatically changes old codes to the new format). I have also spent a lot of time making the program more efficient and have fixed many bugs. A number of new features have also been added.

This new version uses a run-time version of Microsoft Access 2003 rather than Access 97 used by the older versions. It handles larger files and appears more reliable. The license for the Developers addition (used by myself to distribute the software) is quite expensive so I will need to increase the cost of the Medchart software.

A complete list of changes is on my web-site (www.drgluco.com) but I will list some of the major improvements below:

- Automatic backups of claims and outfox to allow easy rollback of sequential number problems
- WCB reports can be sent via Teleplan (\$5.00 extra payment)
- New location codes
- New main patient form
- Recalls improved
- Private claims load much more quickly
- Schedule shows recalls automatically
- Referral physician view improved
- Streamlined claim submission process
- Chronic disease roster to help track GP chronic disease fee items
- Color coding of schedule and many other forms

The charting version has these major changes:

- Improved patient summary and export utility
- Improved chart summary screen
- Chronic disease section expanded and improved
- Rx section includes new views to show vaccines, chronic drugs, episodic drugs
- Expanded family and past history

The BCMA will be providing funding for electronic medical records in the fall of this year. I will be working on making Medchart compliant with their requirements. Over the next several months I will also be porting the database over to MySQL and/ or SQL server for improved database reliability. Check my web-site for more details, as they become available.

The new updates will be active for 12 months from the date of installation, after then it will not be possible to add new records.

All versions are network ready and can be installed on as many computers as you like (I recommend more than one computer to add redundancy to your office). There is a small extra charge for more than one user.

This version includes future updates and support for the next 12 months. Please address checks to myself- I will cash them when I mail out the disks. It will also be possible to order on-line- check my web-site for details.

If you have any suggestions or questions please let me know.

Yours sincerely,

G. Luco M.D.
